ChatGPT Prompts

Agata Gruszka, Dominik Fajferek

Örömmel mutatjuk be a WhitePress® szakértői csapata által a ChatGPT számára összeállított, egyedi felkéréseket tartalmazó összeállítást. Akár inspirációt keresel, akár a mesterséges intelligencia határait teszteled, vagy csupán kreatív támogatásra van szükséged a tartalomkészítéshez, felkéréseink segítenek abban, hogy teljes mértékben kiaknázd a ChatGPT-ben rejlő lehetőségeket. A promptok összeállítása angol nyelven készült, és inspirációként szolgálhat a ChatGPT-vel való interakciók során:

Alapvető promptok	
Prompt ENG	**Comment**

Adatformátum
Példák a chatGPT által támogatott adatformátumokra
tOGGLE cASE: Toggling the case means changing the capitalization of each letter in a text string. For example, "tOGGLE cASE" would become "Toggle Case." This style swaps the uppercase letters to lowercase and vice versa.
Sentence Case: Sentence case is the capitalization style commonly used in sentences. It involves capitalizing the first letter of the first word in a sentence and leaving the rest of the text in lowercase, except for proper nouns and other words that require capitalization.
lower case: Lowercase refers to the style of writing where all letters are in their small or lowercase form. For example, "lower case" remains as "lower case."
UPPER CASE: Uppercase, also known as "capital letters," is the style of writing where all letters are in their large or uppercase form. For example, "UPPER CASE" remains as "UPPER CASE."
Capitalize Word: Capitalizing a word means making the first letter of the word uppercase while keeping the rest of the letters in lowercase. For instance, "Capitalize Word" remains as "Capitalize word."
aLtErNaTe cAsE: Alternating case, similar to toggle case, involves changing the capitalization of each letter in a text string. However, in alternating case, the capitalization alternates between uppercase and lowercase for each letter. For example, "aLtErNaTe cAsE" becomes "AlTeRnAtE CaSe."
Capitalization: Convert text to uppercase or lowercase.
Indentation: Add spaces or tabs to create hierarchical structures.
Alignment: Align text to the left, right, or center.
Line breaks: Insert line breaks or wrap text to fit within a specific width.
Decimal places: Specify the number of decimal places to display.

Currency formatting: Format numbers as currency with symbols and separators.
Percentage formatting: Convert numbers to percentages.
Scientific notation: Display large or small numbers in scientific notation.
Date format: Specify the order and format of day, month, and year.
Time format: Specify the display format for hours, minutes, and seconds.
Timezone: Convert timestamps to different timezones.
CSV (Comma-Separated Values): Use commas to separate values into columns.
TSV (Tab-Separated Values): Use tabs as separators.
JSON (JavaScript Object Notation): Organize data into key-value pairs or nested structures.
XML (Extensible Markup Language): Structure data using tags and attributes
Plain text: Save data as a simple text file.
HTML (Hypertext Markup Language): Create web pages with structured content.
Remove duplicates: Eliminate duplicate records or values.
Sort data: Arrange data in a specific order based on one or more columns.
Filter data: Extract specific rows or columns based on defined criteria.
Normalize data: Restructure data to eliminate redundancy and improve efficiency.
